KEY FACTS

LOWEST NUMBER FOR WORKPLACE INJURIES IN 2020

There were 30 workplace fatal injury cases in 2020, 9 cases (30%) fewer than in 2019. The total number of workplace injury cases¹ decreased by close to 18% from 13,779 cases in 2019 to 11,350 cases in 2020. Occupational disease (OD) cases saw a marginal increase by 2% from 517 cases in 2019 to 528 cases in 2020.

The number of workplace major injury cases decreased by 26% from 629 cases in 2019 to 463 cases in 2020. Similarly, workplace minor injuries decreased by 17% from 13,111 cases in 2019 to 10,857 cases in 2020.

Table 1: Number of workplace injuries, dangerous occurrences and occupational diseases, 2019 and 2020

	2019	2020
Workplace Injuries	13,779	11,350
Fatal Injuries	39	30
Major Injuries	629	463
Minor Injuries	13,111	10,857
Dangerous Occurrences²	21	10
Occupational Diseases	517	528

Table 2: Key safety and health indicators, 2019 and 2020

Per 100,000 workers

	2019	2020
Workplace Injury Rate³	395	344
Fatal Injury rate	1.1	0.9
Major Injury rate	18.1	14.0
Minor Injury rate	376	329
Occupational Disease Incidence Rate⁴	14.8	16.0
Man-days Lost⁵	544,664	417,063

¹ A workplace injury is any personal injury or death resulting from a workplace accident, including work-related traffic injuries. Refer to Annexes E and F for the types of workplace injuries covered.

² Dangerous Occurrences refers to incident where no person is injured, but which had the potential to cause serious injury and death.

³ Workplace Injury Rate = $\frac{\text{No. of Fatal and Non-Fatal Workplace Injuries}}{\text{No. of Workers}} \times 100,000$

⁴ Occupational Disease Incidence Rate = $\frac{\text{No. of Occupational Disease Cases}}{\text{No. of Workers}} \times 100,000$

⁵ For the purpose of this publication, MOM considers a fatal injury as equivalent to the loss of 6,000 man-days, similar to the U.S. National Institute of Occupational Safety and Health (NIOSH)'s table of scheduled charges.

In addition to reporting outcome indicators like workplace injury rates and occupational disease incidence rates, this report included leading indicators from prevention activities. The proactive activities included workplace Medical and Hygiene surveillance, which monitors health risks from exposures to physical and toxic or harmful substances at work, and Business under Surveillance (BUS), which guides poor performing companies to improve their WSH management system.

The main findings on the workplace safety and health performance for 2020 were:

WORKPLACE INJURIES

- 30 workers were fatally injured, at a rate of 0.9 per 100,000 workers.
- 463 workers sustained workplace major injuries, at a rate of 14.0 per 100,000 workers.
- 10,857 workers sustained workplace minor injuries, at a rate of 329 per 100,000 workers.
- 417,063 man-days were lost due to workplace injuries in 2020.

DANGEROUS OCCURRENCES (DO)

- 10 dangerous occurrences were reported to MOM in 2020.

OCCUPATIONAL DISEASES (OD)

- 528 OD cases were confirmed in 2020, with an incidence rate of 16.0 per 100,000 workers.
- The leading OD was Work-related Musculoskeletal Disorders (WRMSD) with 328 cases, including back injury cases due to ergonomic risks. The second most common OD was Noise-induced Deafness (NID) with 110 cases.

BUSINESS UNDER SURVEILLANCE (BUS)

- 7 companies entered the Business under Surveillance⁶ (BUS) programme in 2020.

MEDICAL AND HYGIENE SURVEILLANCE

- 107,069 workers from 2,125 workplaces were monitored under the Medical Surveillance⁷ Programme.
- Under the Hygiene Surveillance⁸ Programme, 81% of the workplaces had static noise levels greater than 85dBA.

⁶ Refer to Annex B and website below for information on BUS programme.

<https://www.mom.gov.sg/workplace-safety-and-health/monitoring-and-surveillance/business-under-surveillance-programme>

⁷ Medical surveillance monitors the results of the medical examinations of workers who are exposed to specific hazards for early detection and prevention of potential ill health. Examinations are conducted by Designated Workplace Doctors (DWDs). Refer to Annex C for more information.

⁸ Hygiene surveillance determines the levels of persons' exposure to noise and airborne toxic substances in the workplace. Refer to Annex C for more information.

OVERVIEW OF TRENDS

WORKPLACE INJURIES

The overall number of reported workplace injuries⁹ decreased by about 18% from 2019 to 2020. A key contributor for the reduction was the work stoppages due to Covid-19. The workplace injury rate consequently decreased from 395 per 100,000 workers in 2019 to 344 per 100,000 workers in 2020.

Figure 1: Number and rate of workplace injuries, 2013-2020

⁹ Employer or Occupier has to report work incidents to the Ministry of Manpower under the WSH (Incident Reporting) Regulations.

WORKPLACE FATAL INJURIES

There were 30 workplace fatal injuries in 2020, 30% (9 cases) fewer compared to 39 cases in 2019. The workplace fatal injury rate consequently decreased from 1.1 per 100,000 workers in 2019 to 0.9 per 100,000 workers in 2020.

Figure 2: Number and rate of workplace fatal injuries, 2013-2020

The Construction sector remained as the top contributor with 9 fatal injuries. Both the Manufacturing and the Water Supply, Sewerage and Waste Management industries each saw 2 more fatal injuries in 2020 compared to 2019.

Figure 3: Number of workplace fatal injuries by industry, 2013-2020

¹⁰ Others refer to the summation of various industries with low incidence of workplace fatalities. For more information, please refer to the statistical tables in Annex A.

CAUSES OF WORKPLACE FATAL INJURIES

The top two causes of workplace fatalities were (i) Falls from Height & (ii) Vehicular Incidents¹¹. These collectively accounted for 40% (12 cases) of the total number of workplace fatal injuries in 2020.

Figure 4: Number of workplace fatal injuries by cause of injury, 2015-2020

¹¹ Vehicular Incidents include Struck by Moving Objects and Caught In/Between Objects where the agent(s) is a vehicle.

¹² Others refer to the summation of various fatal injury causes with low incidence of workplace fatalities. For more information, please refer to the statistical tables in Annex A.

WORKPLACE FATAL INJURIES BY INDUSTRY

CONSTRUCTION

There were 9 workplace fatal injuries in the Construction sector in 2020, 4 fatal injuries fewer than in 2019. The workplace fatal injury rate for the sector consequently decreased from 2.9 per 100,000 workers in 2019 to 2.2 per 100,000 workers in 2020.

Figure 5: Number and rate of workplace fatal injuries for Construction sector, 2013-2020

MARINE

There were 2 workplace fatal injuries in the Marine industry¹³ in 2020, 2 fatal injuries fewer than in 2019. The workplace fatal injury rate consequently decreased from 5.9 per 100,000 workers in 2019 to 3.3 per 100,000 workers in 2020.

Figure 6: Number and rate of workplace fatal injuries for Marine industry, 2013-2020

¹³ The marine industry includes the following activities:

- Shipbuilding and Ship Repair
- Marine Surveying Services (other than classification societies)
- Salvaging of distressed vessels and cargo

Works carried out in the anchorage are also included.

MANUFACTURING

There were 6 workplace fatal injuries in the Manufacturing sector in 2020, 2 fatal injuries more than in 2019. The workplace fatal injury rate for the sector consequently increased from 1.0 per 100,000 workers in 2019 to 1.5 per 100,000 workers in 2020.

Figure 7: Number and rate of workplace fatal injuries for Manufacturing sector, 2013-2020

TRANSPORTATION & STORAGE

There were 5 workplace fatal injuries in the Transportation & Storage industry in 2020, 3 cases fewer than in 2019. The workplace fatal injury rate for the industry consequently decreased from 3.1 per 100,000 workers in 2019 to 2.0 per 100,000 workers in 2020.

Figure 8: Number and rate of workplace fatal injuries for Transportation & Storage industry, 2013-2020

WORKPLACE MAJOR INJURIES

There were 463 workplace major injuries¹⁰ in 2020, 26% (166 cases) fewer compared to 629 cases in 2019. The major injury rate consequently decreased from 18.1 per 100,000 workers in 2019 to 14.0 per 100,000 workers in 2020.

Figure 9: Number and rate of workplace major injuries, 2013-2020

In 2020, the top contributing industry for major injuries was Manufacturing sector with 110 major injuries, followed by the Construction sector with 74 major injuries. The top 2 contributing industries collectively accounted for 40% (184 cases) of the total major injuries in 2020.

Figure 10: Number of workplace major injuries by industry, 2013-2020

¹⁴ Refer to Annex F for the detailed definition of workplace major injuries.

CAUSES OF WORKPLACE MAJOR INJURIES

The top two causes of workplace major injuries were (i) Slips, Trips & Falls and (ii) Machinery Incidents,¹⁵ these collectively accounted for 47% (217 cases) of the total number of workplace major injuries in 2020.

Figure 11: Number of workplace major injuries by cause of injury, 2015-2020

¹⁵ Machinery Incidents include Struck by Moving Objects, Caught In/Between Objects and Cut/Stabbed by Objects where the agent(s) is an industrial machine, industrial hand tool or other machines and tools.

WORKPLACE MAJOR INJURIES BY INDUSTRY

CONSTRUCTION

There were 74 workplace major injuries in the Construction sector in 2020, 61 cases fewer than in 2019. The workplace major injury rate for the sector consequently decreased from 29.7 per 100,000 workers in 2019 to 17.9 per 100,000 workers in 2020.

Figure 12: Number and rate of workplace major injuries for Construction sector, 2013-2020

MARINE

There were 13 workplace major injury in the Marine industry in 2020, 3 cases fewer than in 2019. The workplace major injury rate consequently decreased from 23.6 per 100,000 workers in 2019 to 21.2 per 100,000 workers in 2020.

Figure 13: Number and rate of workplace major injuries for Marine industry, 2013-2020

MANUFACTURING

There were 110 workplace major injuries in the Manufacturing sector in 2020, 33 fewer than in 2019. The workplace major injury rate for the sector consequently decreased from 34.1 per 100,000 workers in 2019 to 28.0 per 100,000 workers in 2020.

Figure 14: Number and rate of workplace major injuries for Manufacturing sector, 2013-2020

TRANSPORTATION & STORAGE

There were 50 workplace major injuries in the Transportation & Storage industry in 2020, 12 fewer than in 2019. The workplace major injury rate for the industry consequently decreased from 23.8 per 100,000 workers in 2019 to 19.8 per 100,000 workers in 2020.

Figure 15: Number and rate of workplace major injuries for Transportation & Storage industry, 2013-2020

WORKPLACE MINOR INJURIES

There were 10,857 workplace minor injuries in 2020, 17% (2,254 cases) fewer compared to 13,111 cases in 2019. The minor injury rate consequently decreased from 376 per 100,000 workers in 2019 to 329 per 100,000 workers in 2020.

Figure 16: Number and rate of workplace minor injuries, 2013-2020

In 2020, the leading contributor of minor injuries was the Manufacturing sector with 2,330 cases, followed by the Construction sector with 1,674 cases and the Accommodation & Food Services industry with 1,245 cases. The top 3 contributing industries collectively accounted for 48% (5,249 cases) of the total minor injuries in 2020.

Figure 17: Number of workplace minor injuries by industry, 2013-2020

CAUSES OF WORKPLACE MINOR INJURIES

The top three causes of workplace minor injuries were (i) Slips, Trips & Falls, (ii) Machinery Incidents, and (iii) Struck by Moving Objects. These collectively accounted for 55% (5,993 cases) of the total number of workplace minor injuries.

Figure 18: Number of workplace minor injuries by cause of injury, 2015-2020

DANGEROUS OCCURRENCES (DO)

There were 10 cases of DOs reported to MOM in 2020, 11 cases fewer than in 2019. Amongst the DO cases, 7 cases involved Collapse/Failure of Structures & Equipment and 3 cases involved Fires & Explosion.

Figure 19: Number of dangerous occurrences, 2013-2020

In 2020, the Construction sector was the top contributor accounting for 50% (5 cases) of the total number of DO cases. The second top contributing industry was Manufacturing with 2 DO cases.

Figure 20: Number of dangerous occurrences by industry, 2013-2020

OCCUPATIONAL DISEASES (OD)

There were 528 cases of ODs confirmed in 2020, an increase of 11 cases compared to the 517 OD cases confirmed in 2019. The OD incidence rate consequently increased from 14.8 confirmed cases per 100,000 workers in 2019 to 16.0 per 100,000 workers in 2020.

Figure 21: Number and rate of occupational diseases, 2013-2020

The Manufacturing sector was the top contributor in 2020 with 101 confirmed OD cases, followed by the Construction sector and the Health Services industry with 73 and 65 confirmed cases, respectively. These industries collectively accounted for 45% (239 cases) of all confirmed OD cases in 2020.

Figure 22: Number of occupational diseases by industry, 2013-2020

TYPES OF OCCUPATIONAL DISEASES

The top three types of OD cases confirmed were (i) Work-related Musculoskeletal Disorders¹⁶, (ii) Noise-induced Deafness and (iii) Infectious Diseases. These collectively accounted for 89% (472 cases) of all OD cases confirmed in 2020.

Figure 23: Number of occupational diseases by type, 2013-2020

¹⁶ Back injuries due to ergonomic risks were considered as Work-related Musculoskeletal Disorders and included as an occupational disease since 2013.

WORK-RELATED MUSCULOSKELETAL DISORDERS (WRMSD)

WRMSD cases increased from 293 cases in 2019 to 328 cases in 2020. The Accommodation and Food Services industry was the top contributor, accounting for 16% (54 cases) of all WRMSD cases, followed by Manufacturing and Health Services industries with 49 (15%) and 45 (14%) WRMSD cases respectively.

Figure 24: Number and rate of work-related musculoskeletal disorders, 2013-2020

NOISE-INDUCED DEAFNESS (NID)

NID cases reduced from 169 cases in 2019 to 110 cases in 2020. The Manufacturing sector continued to be the top contributor to NID cases, accounting for 43% (47 cases) of all NID cases. This was followed by the Transportation & Storage industry and the Construction sector with 18 (16%) and 13 (12%) cases, respectively.

Figure 25: Number and rate of noise-induced deafness, 2013-2020

WORK INJURY COMPENSATION

The Work Injury Compensation Act (WICA) lets employees make claims for work-related injuries or diseases without having to file a civil suit under common law. It is a low-cost and quicker alternative to common law for settling compensation claims.

NUMBER OF WORK INJURY CLAIMS AND PAYOUT AMOUNT AWARDED

The total number of work injury claims¹⁷ awarded increased by 2.4% from 15,992 cases in 2019 to 16,371 cases in 2020. Despite the increase in number of cases, the total compensation payout awarded reduced by 17.3% from \$120.02 million in 2019 to \$99.24 million in 2020. These were mainly contributed by the reduction in the numbers for both Fatal and Permanent Incapacity cases.

Table 3: Number of TI and PI workplace injuries compensation claims and amount awarded, 2018-2020

Year	Temporary Incapacity (TI) ¹⁸		Permanent Incapacity (PI) ¹⁹		
	No. of cases	MC Wages (\$million)	No. of cases	MC Wages (\$million)	PI Compensation (\$million)
2018	10,170	\$9.48	4,304	\$12.41	\$73.88
2019	11,496	\$11.22	4,370	\$14.92	\$76.26
2020	12,599	\$10.20	3,664	\$14.39	\$60.01

Table 4: Number of Fatal and Total workplace injuries compensation claims and amount awarded, 2018-2020

Year	Fatal		Total		
	No. of cases	Death Compensation (\$million)	No. of cases	MC Wages (\$million)	PI/Death Compensation (\$million)
2018	111	\$15.96	14,585	\$21.89	\$89.84
2019	126	\$17.62	15,992	\$26.14	\$93.88
2020	108	\$14.64	16,371	\$24.59	\$74.65

¹⁷ Work injury compensation data excludes cases that were withdrawn, cases with No-Further-Action required and cases that were not admitted under WICA.

¹⁸ Temporary incapacity claims arise from non-permanent work injuries where an injured employee is temporarily unable to perform work and earn his usual wages after being placed on medical leave.

¹⁹ Permanent incapacity claims arise from injuries which cause permanent injuries or loss of bodily functions to an injured employee.

BUSINESS UNDER SURVEILLANCE

Proactive surveillance of high risk workplaces enables preventive measures to be taken early. The Business Under Surveillance (BUS) programme focuses on improvement of WSH management systems.

BUSINESS UNDER SURVEILLANCE

More than 300 companies had been placed under the programme since its inception in 2007. Companies on the BUS programme included those with (i) serious accidents, (ii) issued with Stop Work Orders (SWO) for poor WSH management, or (iii) accumulated a substantial number of demerit points. Companies exit the programme when their WSH standards have improved to a level where they can effectively manage their WSH risks. In 2020, 7 companies entered the BUS programme. They were all from the Construction sector. For the 5 companies which exited the programme in 2020, they were under surveillance for an average of 18 months.

Figure 26: Number of companies entering and exiting surveillance, 2013-2020

MEDICAL AND HYGIENE SURVEILLANCE

Hygiene and Medical surveillance programmes monitor workers' exposure and health effects from exposure to the list of hazards under the Workplace Safety and Health (General Provisions) Regulations, Workplace Safety and Health (Noise) Regulations and the Workplace Safety and Health (Medical Examinations) Regulations.

MEDICAL SURVEILLANCE

Workplaces with hazards listed in the Schedule of the WSH (Medical Examinations) Regulations are required to send their exposed workers for pre-placement and periodic medical examinations. The number of workers under surveillance have dropped from 133,740 in 2019 to 107,069 in 2020. Similarly, the number of workplaces under medical surveillance has also decreased from 2,156 in 2019 to 2,125 in 2020.

Figure 27: Number of workers under medical surveillance, 2013-2020

Figure 28: Number of workplaces under medical surveillance, 2013-2020

Figure 29: Medical monitoring for noise exposure by Top 5 industries, 2020

Figure 30: Medical monitoring for chemical exposure by Top 5 industries, 2020

HYGIENE SURVEILLANCE

Workplaces where persons are likely to be exposed to excessive noise or toxic substances are required to conduct regular hygiene monitoring to measure their workers' exposure to noise and chemicals under the WSH (Noise) Regulations and the WSH (General Provisions) Regulations respectively.

NOISE EXPOSURE LEVELS

Based on the noise monitoring results submitted over the past three years, 81% of the workplaces had noisy processes exceeding 85dBA. 76% of the workplaces that conducted personal exposure monitoring had workers who were exposed to excessive noise (above an equivalent sound pressure level of 85dBA over an eight-hour workday). Workplaces with noisy processes or workers who are exposed to excessive noise will need to implement additional control measures to reduce or control the noise generated from machinery or equipment so as to reduce workers' exposure to below the permissible limits as stipulated in the Schedule of the WSH (Noise) Regulations.

Figure 31: Static noise monitoring results by industry, 2018-2020

Figure 32: Personal noise exposure results by industry, 2018-2020

CHEMICAL EXPOSURE LEVELS

A total of 1,561 chemical monitoring results were received in 2020, of which 40% of the results were from the Manufacture of Petrochemical Products industry and Metalworking industry (20% each). Workplaces with chemical exposure levels higher than permissible exposure level (PEL²⁰) will require implementation of additional engineering control measures to eliminate or reduce workers' exposure to below the PEL.

Figure 33: Chemical exposure results by industry, 2020

²⁰ Permissible Exposure Level (PEL) refer to the maximum time weighted average concentration of a toxic substance to which any person may be exposed.

ANNEX B

BUSINESS UNDER SURVEILLANCE

The Business under Surveillance (BUS) programme consists of two phases – Assessment and Surveillance.

The Assessment phase involves rigorous and methodical review on companies that are of concern to ascertain the effectiveness of their Risk Management programme as well as the strength of their WSH Management Systems.

Companies that fail the Assessment phase would be placed under the Surveillance phase. During the Surveillance phase, the Occupational Safety and Health Division (OSHD) of Ministry of Manpower (MOM) works closely with the senior management and WSH personnel of these BUS companies to carry out a gap analysis and to develop outcome-based action plans.

OSHD then conducts frequent inspections to verify the progress of the companies' implementation of their action plans and closely monitors the companies' WSH performance. BUS companies can only exit from the programme upon successful implementation of their Action Plan, achieved satisfactory audit outcomes, and have plans to build a strong WSH culture within the company.

ANNEX C

HYGIENE AND MEDICAL SURVEILLANCE

HYGIENE SURVEILLANCE

Measuring the exposure levels of specific workplace chemical hazards provide a good indication on whether the conditions in the work environment are within the Permissible Exposure Levels (PEL), as stipulated under the WSH (General Provisions) Regulations. Companies with chemical exposures exceeding 10% PEL are required to monitor the exposure levels at least annually, conducted by a competent person.

Under the WSH (Noise) Regulations, workplaces with 10 or more workers who are exposed to excessive noise are required to monitor their workers' noise exposure at least once every three years, or earlier when there are changes to the processes. The monitoring must be conducted by a competent person using calibrated equipment to ensure accuracy of results.

Industrial hygiene data from assessments conducted by MOM and results submitted by companies with in-plant monitoring are maintained within a National Database for Noise and Chemical Exposure. This enables MOM to proactively identify high-risk workplaces, evaluate trends in exposure levels and advise employers on control measures and appropriate monitoring programmes.

MEDICAL SURVEILLANCE

The Medical Surveillance Programme serves to monitor workers' exposure to specific hazards and to identify early and possibly reversible changes in health effects. The programme aims to prevent overt occupational diseases through early detection of cases with excessive occupational exposure to specific health hazards. It involves monitoring of workers' health and implementation of measures to minimise the risks. High-risk workplaces would be monitored more rigorously to ensure control measures are put in place.

This monitoring assesses the "internal dose" of the worker and the effects from exposure by determining:

- a) The concentrations of the chemicals or their metabolites in biological samples (measuring the absorption or body burden) indirectly via blood, urine, and/or end-exhaled air.
- b) The indicators of health effect related to the internal dose so as to identify early and reversible changes, such as degree of hearing loss, and effects on liver and kidney.

Central to the Medical Surveillance Programme is the WSH (Medical Examinations) Regulations which prescribe a list of 19 hazards requiring medical examinations which can only be conducted by Designated Workplace Doctors (DWDs) registered with MOM. In addition, Occupational Safety and Health Division (OSHD) of the MOM may also recommend the implementation of medical surveillance programmes for non-prescribed hazards if the health risk is significant and where biological indicators are available. Some of these hazards include toluene, trinitrotoluene, xylene, fluoride and hexane.

Based on the findings of the medical examinations, workers who are medically unfit or who are over-exposed to chemicals are suspended, either on a temporary or permanent basis. The objective is to ensure that all exposed workers remain healthy and fit for work while exposed to the hazards. Medical monitoring is conducted once every six months for lead and organophosphate, and annually for all other hazards.

ANNEX D

SOURCE OF DATA

Data on workplace and work-related traffic injuries, dangerous occurrences and occupational diseases were collated from incident reports made by employers, occupiers and medical practitioners in fulfilment of their obligations under the Workplace Safety and Health Act and Workplace Safety and Health (Incident Reporting) Regulations.

Medical and Hygiene Surveillance data were collated from reports submitted to OSHD, MOM as well as industrial hygiene data from assessments conducted by OSHD, MOM. Business Under Surveillance information was obtained from OSHD, MOM.

Employment data used in the computation of workplace fatal, injury and occupational disease incidence rates and data on the average weekly hours worked used in the estimation of man-hours worked were extracted from records within the Ministry of Manpower.

ANNEX E

DATA COVERAGE

The types of workplace and work-related traffic injuries and occupational diseases covered in the reported statistics include the following:

- Workplace and work-related traffic injuries sustained by employees and resulting in more than three days of medical leave, regardless of whether these were consecutive days;
 - Workplace and work-related traffic injuries sustained by employees and resulting in at least 24 hours of hospitalisation;
 - Workplace and work-related traffic incidents resulting in the death of employees and self-employed persons;
 - Workplace and work-related traffic incidents resulting in the injury of self-employed persons who have to be taken to the hospital for treatment; and
 - Occupational diseases listed in the Second Schedule of the Workplace Safety and Health Act and Work Injury Compensation Act.
-

ANNEX F

CONCEPTS AND DEFINITIONS

Incident Type refers to the type of event which resulted in the injury of a victim. Where the event involves a chain of incidents, the incident type should be the one that triggered the chain of other incidents.

Incident Agent refers to the object or physical environment, which due to its hazardous nature/condition, leads to the occurrence of a particular type of incident. It is related to the incident, not injury.

Major Injuries refer to non-fatal injuries which are more severe in nature. Major injuries are defined using a combination of factors, including the nature of injury, part of the body injured, incident type and duration of medical leave. These include:

- amputation
 - blindness
 - deafness
 - paralysis
 - crushing, fractures and dislocations: head, back, chest, neck and hip
 - exposure to electric current
 - asphyxia/drowning
 - burns with more than 20 days of medical leave
 - concussion with more than 20 days of medical leave
 - mosquito borne diseases with more than 20 days of medical leave
 - virus outbreak with more than 20 days of medical leave
